PROFESSIONAL EXPERIENCE

ICARO Project   **2023**
IMSS Warehouse in Colima

- A system was developed with PHP in which indicators, contracts and requirements are concentrated, establishing an effective workflow.

In this project I mainly learned what it means to work collaboratively using GIT and Notion, where I established tasks for each member.

Inventory Control and Laboratory   **2022**
Faculty of Nursing of the UdeC

- Developed a laboratory class management and inventory control system in PHP.

In this project I implemented the MVC design pattern together with the OOP paradigm. I was also working on improving the security of the website and applying good practices to prevent the vulnerability of the site.

Automatic Irrigation System   **2021**
University of Colima

- System that detects humidity, temperature, etc. of a plant and automatically waters it according to its needs.

This project is based on ARDUINO IDE, for its operation I implemented internet of things and firebase to display data in real time.

EDUCATION HISTORY

Undergraduate Software Engineering   **2020 - Act**
University of Colima

- I learned to program in different languages for different devices.
- I learned about project management.

Master Course in PHP   **2023 - Act**
Udemy

- I learned in detail SQL, OOP, MVC, Laravel, Symfony, etc.
